Experiment 3: Network Switching Subsystem Using Figma

Aim: - To develop a flowchart in Figma depicting the operation of a Network Switching Subsystem (NSS) in a mobile cellular system.

Procedure

1. Open Figma and create a new design file.
2. Add a title, “Network Switching Subsystem in a Mobile Cellular System.”
3. Create shapes to represent the start, call request, subscriber verification, call routing, and end stages.
4. Add text labels for BTS (Base Transceiver Station), BSC (Base Station Controller), MSC (Mobile Switching Centre), HLR (Home Location Register), VLR (Visitor Location Register), and AuC (Authentication Centre).
5. Arrange the shapes in a logical sequence to represent the call-processing operation.
6. Connect the shapes using arrows to indicate the direction of the process.
7. Add a decision diamond labelled “Subscriber valid?” with YES and NO branches.
8. Connect the YES branch to call routing and call establishment, and the NO branch to call rejection.
9. Use suitable colors, alignment, and spacing to make the flowchart clear and readable.
10. Preview the design and verify that the flowchart correctly represents the basic operation of the Network Switching Subsystem.

Output: -

Figmadesignlink:https://www.figma.com/design/rAXkbtmjA7ZttPAbdt2aRu/Untitled?node-id=0-1

Result: -Thus, a flowchart illustrating the operation of the Network Switching Subsystem in a mobile cellular system was created successfully using Figma. The flowchart represents subscriber verification, call routing, call establishment, and call rejection.
