Experiment 5: Mobile Application Localization Using Figma

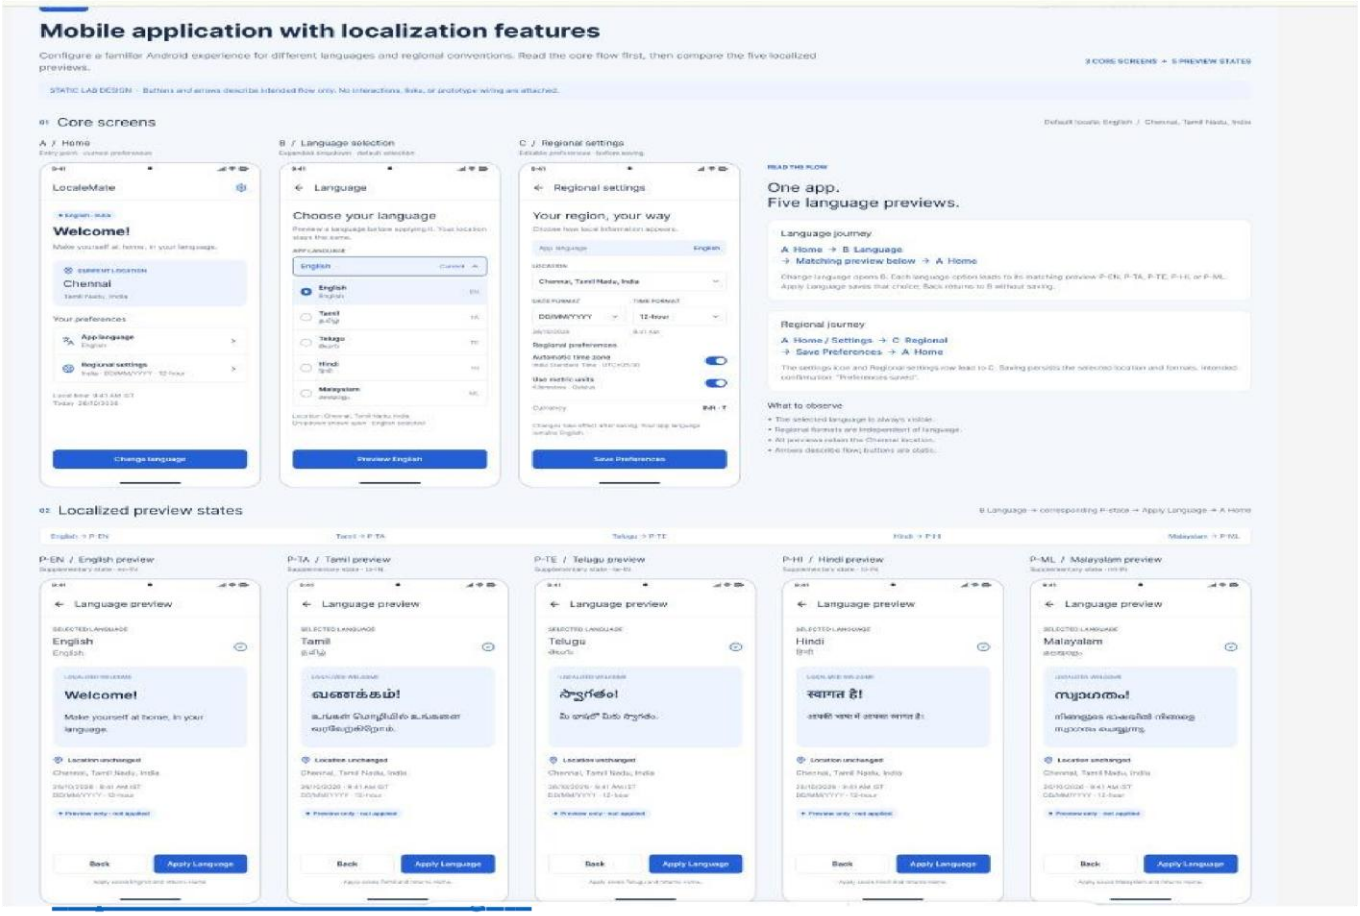

Aim: -To design a wireframe for a mobile application that incorporates localization features using Figma.

Procedure

1. Open Figma and create a new design file.
2. Create a mobile phone frame to represent the application screen.
3. Add a header with the application name and a language selection option.
4. Design interface elements such as a location search bar, map area, and location details.
5. Add a language selection menu to allow users to choose their preferred language.
6. Include location-based features such as current location, nearby places, and navigation options.
7. Use simple icons, readable text, and suitable colors to improve user convenience.
8. Arrange all elements neatly within the mobile frame to create a clear wireframe.
9. Preview the design and verify that the localization and location-based features are displayed correctly.

Output

Result: -Thus, a wireframe for a mobile application incorporating localization features was designed successfully using Figma. The design includes language selection, location search, current location, and nearby places to improve user convenience.
